

I am against the use of exposed or open line BPL. BPL poses a serious problem for any user of the HF Spectrum. This would include Amateur Radio Operators, Short Wave Listeners, Military and Transportation services. BPL drowns out many AM broadcast stations on the 550 Khz. to 1700 Khz. frequencies. The broadcasters will complain that they are not able to reach the current market with their advertising and programming.

For example, in Emmaus, PA, where BPL has been already been placed into service. Many listeners in Emmaus cannot hear KYW AM 1030 kcs. in Philadelphia, running 50,000 watts power. BPL also renders the HF spectrum useless to Amateur Radio Operators within 100 meters of the exposed BPL lines.

Currently Cable Services deliver similar services via "Closed Circuit" cables and fiber optics. Leakage of the Cable Services into the HF spectrum are severely dealt with by the FCC. Leakage of BPL into the HF spectrum will not even be a violation as open wire cannot suppress leaking of RF. If BPL is permitted, it should be only on shielded and filtered lines, similar to those required

by the cable TV industry. RF signals are not supposed to escape from or intrude into the cable TV lines. Radio signals can coexist with cable signals even on the same frequencies. Havoc occurs when signals leak into and out of the cables. Are the BPL users going to establish replacements for the current amateur radio emergency communications stations?

Currently, we hams frequently contend with noisy electric power lines, hardware, and transformers which interfere with our reception. The FCC requires the electric utilities to repair and clean up those lines. Our local electric utilities, Met Ed and PPL, are very cooperative, compliant, and helpful. Please do not allow any change by allowing "open wire BPL." During emergencies, how will we communicate?

Even if BPL is turned off during emergencies, what hams will be left to communicate? They will have quit in disgust, sold their equipment, and dismantled their stations. The FCC must protect the non commercial communications interests that invade the HF spectrum. To damage the HF infrastructure of over 1 million licensed amateur radio operators, is to remove the backbone of emergency communications.

There are better ways to accomplish the same goal that the power industry is seeking. Lets build covered bridges around the problem, not clear the village of all the infrastructure.

Less than 2 months ago, we had a wide scale power outage in the Northeast. The news media has brought to light the fact that the nations power grid is in need of overhaul. I think the power companies should be spending their money on fixing and/or maintaining their infrastructure to deliver POWER.

Access to the internet is available to those that want it through other means. If this is approved, in a short time, the electric utilities will be back asking for a major rate increase to pay for delivering BPL to the masses. As an Amateur Radio operator, i will be paying twice, once in losing frequencies in the HF bands and again when I have to pay for something (BPL) that i do not want or need.

thank you

Robert P. Brown
